                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a purified polypeptide with alpha-amylase activity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for producing a high-malcose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch modification in the paper and pulp industry. For removing starch modification in the paper and pulp industry, for removing starch modification in the paper and pulp industry. For removing starch modification in the paper and pulp industry for removing starch modification in the paper and pulp industry. For removing starch modification in the paper and pulp industry for removing starch modification in the paper and pulp industry. For removing starch modification in the paper and pulp for predicts sequences and pulp and for reducing staling of bakery products. Sequences ABXO8411-ABXO8515 represent DNA molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 GTGCCTTCAGGAGGAATATGGTGGACACAATACGGCAGAAGATACCGGAGTGGTACGAT 120

The invention relates to a purified polypeptide with alpha-amylase activity and the polynuclectide encoding it. The polypeptide is useful tor hydrolysing stratch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefyling starch, for washing small molecules, for liquefyling starch, for washing can object, for textile desizing, for treating lignocallulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch containing stains from a material and for reducing stalling of bakery products. Sequences ABX08411-ABX081515 represent DNA molecules
Alpha amylase; gene; ds, starch linkage hydrolysis; starch liquefaction, starch breakdown catalysis; textile desizing; lignocellulosic fibre; enzymatic de-inking; recycled paper; high-maltose syrup; dough; high-maltose syrup; dough; blidy glucose syrup; corn-wet milling process; detergent; baking process; beverage; oil field; fuel ethanol; brewing process; staling; starch modification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a purified polypeptide with alpha-amylase activity and the polynuclectide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocallulosic fibers, improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producting a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alpha amylase; gene; ds; starch linkage hydrolysis; starch liquefaction; starch breakdown catalysis; textile desizing; lignocellulosic fibre; enzymatic de-inking; recycled paper; high-maltoses syrup; dough; high glucose syrup; corn-wer milling process; detergent; baking process; beverage; oil field; fuel ethanol; brewing process; staling;

starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The cubterranean formation which surrounds a completed well bore. The poppeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing a starch modification in the paper and pulp industry, for removing starch modification in the paper and pulp industry, for removing starch containing strains from a material and for reducing staling of bakery products. Sequences ABXO8411-ABXO8515 represent DNA molecules containing alpha amylase polypeptides of the invention

The invention relates to a purified polypeptide with alpha-amylase activity and the polynuclectide encoding it. The polypeptide is useful for Mydrolysing starch linkages, for ratalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product preparing a dough or a baked product preparing a dough or a baked product baking processes, beverages, oil feales (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing staring starins from a material and for reducing staling of bakery products. Sequences ABXO8411-ABXO8515 represent DNA molecules encoding alpha amylase polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention relates to a purified polypeptide with alpha-amylase activity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for caralysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocallulosic fibers, for improving fibre properties, for naymatic de-inking of recycled paper pulp, for producing a high-mailtose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a mixed subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and pulp industry, for removing starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of bakery products. Sequences ABXO8411-ABXO8515 represent DNA molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to a purified polypeptide with alpha-amylase activity and the polynuclectide encoding it. The polypeptide is useful for the polynuclectide encoding it. The polypeptide is useful for the polynuclectide for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The pulpaperide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing a starch modification in the paper and pulp industry for removing catach containing stains from a material and for reducing staining of bakery products. Sequences ABXO8411-ABXO8515 represent DNA molecules encoding alpha amylase polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalyshing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing mall molecules, for liquefying starch, for washing impoving fibre properties, for enzymatic delinking of recycled paper pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a cubterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a deuplor of properties, packing processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of an encoding all and a parter and pulp industry. For removing starch containing stains from a material and for reducing staling of an encoding all and a parter and pulp industry.

```
The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful controlly and the polynucleotide encoding it. The polypeptide is useful controlly and the polynucleotide for treatalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing controlly for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-maliose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a complement formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The prepared from the dough and in corn-wet milling processes, detergents, containing processes, beverages, oil fields (fuel ethanol), brewing processes can estarch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of bakery products. Sequences Abbosall.-Absorgent DNA molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alpha amylase; gene; ds; starch linkage hydrolysis; starch liquefaction; starch breakdown catalysis; textile desizing; ligmocellulosic fibre; earymatic de-inking; recycled paper; high-maltose syrup; dough; high glucose syrup; corn-wer milling process; detergent; baking process; beverage; oil field; fuel ethanol; brewing process; staling;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

```
The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful for Mydrolysing starch linkages, for caralysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocallulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper improving fibre properties, for enzymatic de-inking of recycled paper prub, and for increasing the flow of production fluids from a syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel purified polypeptide with alpha-amylase activity, useful e.g. fo liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.
                                                                                                                                                                                                                                                                                                                       DNA encoding alpha amylase polypeptide #29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Fig 16; 301pp; English

pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergants, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of bakery products. Sequences ABSO8411-ABSO8915 represent DNA molecules encoding alpha amylase polypeptides of the invention

/ The min RNAs prepared from Magnaporthe grisea grown at 23C in the dark with constant gyratory shaking |
/ Ito rpm in Vogel's minimal medium containing 0.5% isolated |
/ Fice cell walls as the sole carbon source. Library |
/ Drovided by Sheng-Cheng Wu. Sequences were processed by one of two methods. Where a full-length alignment to the |
/ M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredPhrap version 991019 and trimmed according to phd files (0.05) and for vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BZ424843 13-DEC-2002 100020232-5732 Aspergillus terreus random genomic DNA clone library Aspergillus terreus genomic, genomic survey sequence. /come take to the come temperature. Due to a come two days on filter paper at room temperature. Due to a cloning artefact caused by the kir, in most cases the EcoRI site is NOT present, as well as the EcoRIadapter used for cloning. To excise the insert, restriction sites worter also due to the cloning system used libe white worts. Also due to the cloning system used Blue/white selection for recombinats is not 100% reliable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  432  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
